PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience in **AWS cloud infrastructure, CI/CD automation, Linux, Docker, Kubernetes, networking, monitoring, and scalable deployments**. Skilled in building secure cloud architectures using **VPC, EC2, Load Balancers, Auto Scaling, RDS, Lambda, API Gateway, DynamoDB, S3, IAM, Jenkins, GitHub Actions, Terraform, Prometheus, and Grafana**. Focused on automation, reliability, and production-ready DevOps workflows.

TECHNICAL SKILLS

Cloud: AWS EC2, VPC, S3, IAM, Auto Scaling, Elastic Load Balancing, RDS, Aurora, Lambda, API Gateway, DynamoDB, CloudWatch, Route 53
DevOps and CI/CD: Jenkins, Git, GitHub, deployment automation, pipeline workflows
Containers: Docker, Docker Swarm, Kubernetes [Minikube/kOps], Docker Hub
Infrastructure as Code: AWS CloudFormation, Terraform
Observability & Monitoring: Prometheus, Grafana, AWS CloudWatch
Scripting and OS: Bash, Linux: Amazon Linux 2023 & Ubuntu
Networking: VPC, subnets, route tables, internet gateway, NAT gateway, security groups, load balancing, DNS

PROJECTS

- AWS 3-Tier Scalable Web Architecture** **AWS, EC2, VPC, ALB, Auto Scaling, RDS**
- Designed and deployed a **highly available three-tier AWS architecture** using public/private subnets across **2 Availability Zones**.
 - Configured internet-facing and internal load balancers, EC2 web and application servers, Auto Scaling, security groups, and private database networking.
 - Integrated an AWS-managed MySQL database layer using RDS with **zero direct public exposure** for backend and database services.
 - Applied AWS Well-Architected principles to improve reliability, scalability, security, and infrastructure consistency.
- AWS Serverless Expense Tracker Application** **Cognito, S3, API Gateway, Lambda, DynamoDB, Cloudfront**
- Built a fully serverless expense tracker application, eliminating the need to manage EC2 servers while **improving scalability and operational efficiency**.
 - Implemented secure user authentication using **Cognito Hosted UI and JWT authorization**, enabling user-specific access to expense records.
 - Implemented **CRUD APIs** for expense records and connected frontend actions with backend Lambda functions through API Gateway routes.
 - Hosted the frontend on S3 Bucket through a highly available static website setup coupled with CloudFront edge location caching for low latency.
- Banking Microservices Application Deployment on Kubernetes** **Jenkins, Docker, Kubernetes, Helm, Argo CD, Git**
- Deployed a **MySQL-connected banking microservices application** on an AWS kOps Kubernetes cluster with multiple containerized services.
 - Built and pushed Docker images to Docker Hub and **automated image updates using a Jenkins CI pipeline** integrated with GitHub webhook triggers.
 - Executed **GitOps-based deployment using Argo CD** to sync Kubernetes manifests from GitHub, reducing manual deployment steps across several Kubernetes YAML configurations.
 - Configured **NGINX Ingress routing** for application paths, implemented Kubernetes **RBAC** for controlled access, and applied **HPA-enabled pod autoscaling** based on workload demand.

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate – 24 March 2026:** Validated expertise in designing secure, highly available, scalable, and cost-optimized AWS architectures using VPC, EC2, IAM, Load Balancing, Auto Scaling, RDS, and S3.

EDUCATION

Bachelor of Arts
Indira Gandhi National Open University

by correspondence
2025 – 2027
